

Stakeholder B: Hedonistic, polyandrous twenty-year old

Profile

This is a fun-loving student who has a great many social contacts, including several partners. She has a normal day job as a school teacher, but what she looks forward to all day is her free time after work and during the weekends. Full of energy, she is always looking to have a good time. Going out can be nerve-wrecking though, as she needs to be careful about partners meeting each other. She needs people around her, as is not very good at amusing herself on her own.

Attitude towards appointments

For the twenty-year old, part of the fun is juggling appointments in such a way that her partners do not learn of each others' existence. When asked out by more than one partner, she wonders what she feels like doing that evening and which partner fits that idea best.

Security goal summary

- Multiple agendas based on partners.
- Receives notification if unauthorised access to partner agenda.
- Requires visibility of partner diaries.
- Partner appointments should not be in the same location on the same day.
- Available slots should be available to other partners.
- Pseudonyms should be supported for partners, activities, and herself.
